

Aldermoor Technologies — Company Overview

Who we are, what we build, and how we work

About Aldermoor Technologies

Aldermoor Technologies is a software company that builds Relay, a field service management platform used by utilities, telecommunications operators and facilities management firms to plan, dispatch and evidence work carried out away from the office.

The company was founded in 2016 in Bristol, United Kingdom, by Imogen Hale and Rafal Nowicki, who had spent the previous decade building scheduling systems for a regional water utility and were frustrated that every tool they encountered treated the field technician as an afterthought. Aldermoor now employs 180 people across three offices and serves approximately 340 customers in 18 countries.

Our tagline, "Work that finds its way", describes the product's central idea: a job should reach the right technician, with the right parts and the right information, without a dispatcher having to hold the whole schedule in their head.

Mission

To make field work predictable for the people who plan it and straightforward for the people who do it.

What we believe

- The technician is the primary user. If the mobile app is slow or confusing, nothing else about the system matters.
- Offline is not an edge case. Field work happens in basements, plant rooms and rural sites, and the product is designed for intermittent connectivity rather than patched for it.
- Scheduling decisions should be explainable. Every automatic assignment Relay makes can be traced to the constraints that produced it.
- Customer data belongs to the customer. Export is available at any time, in an open format, without asking us.

Company facts

Item	Detail
Legal name	Aldermoor Technologies Ltd.
Founded	2016
Headquarters	Bristol, United Kingdom
Employees	180
Customers	Approximately 340 organisations in 18 countries
Product	Relay — field service management platform
Ownership	Privately held; Series B closed in 2023
Website	www.aldermoor.example
