

Security and Compliance Overview

Certifications, architecture and data handling

Certifications and audits

Framework	Status	Most recent	Scope
ISO/IEC 27001:2022	Certified	Recertified March 2026	Relay platform, supporting infrastructure, Bristol and Kraków offices
SOC 2 Type II	Report issued annually	Period ending 31 December 2025	Security, Availability and Confidentiality
UK GDPR and EU GDPR	Compliant	Data Protection Officer appointed	All personal data processed on behalf of customers
Cyber Essentials Plus	Certified	January 2026	United Kingdom operations

The current ISO 27001 certificate and the most recent SOC 2 Type II report are available to customers and prospects under a mutual non-disclosure agreement. Request them from security@aldermoor.example.

Data residency

Customers choose a data region when their tenant is provisioned. The choice is fixed for the life of the tenant; moving an existing tenant between regions is a professional services engagement.

Region	Location	Availability
EU	Frankfurt, Germany	All plans
US	Northern Virginia, United States	All plans
UK	London, United Kingdom	Enterprise only

Encryption

- In transit — TLS 1.3, with TLS 1.2 accepted for legacy rugged devices. Older protocol versions are refused.
- At rest — AES-256 applied to databases, object storage and backups.
- Keys are managed in a hardware security module and rotated annually.
- Attachments uploaded from Relay Mobile are encrypted on the device before transmission.

Access control

- Role-based access control with seven built-in roles and optional custom roles on Enterprise.
- SAML 2.0 single sign-on and SCIM 2.0 user provisioning on Enterprise.
- Multi-factor authentication available on all plans and enforceable by policy.
- Aldermoor staff access to customer data requires a named business reason, is granted for a maximum of eight hours, and is logged.
- No Aldermoor employee has standing access to production customer data.

Resilience and recovery

Measure	Commitment
Backup frequency	Hourly incremental, daily full
Backup retention	35 days
Recovery point objective (RPO)	1 hour
Recovery time objective (RTO)	4 hours
Disaster recovery test	Twice yearly, results shared with Enterprise customers on request
Availability architecture	Multi-availability-zone within the chosen region

Testing and vulnerability management

- An independent penetration test is carried out annually; a summary letter is available to customers.
- Automated dependency scanning runs on every build.
- Critical vulnerabilities are remediated within 7 days, high within 30 days, medium within 90 days.
- A responsible disclosure programme is published; reports go to security@aldermoor.example.

Sub-processors

Aldermoor uses a small number of sub-processors. Customers are notified at least 30 days before a new sub-processor is added, and may object in writing.

Sub-processor	Purpose	Region
Cloud infrastructure provider	Hosting, storage, backup	EU, US or UK per tenant
Transactional email provider	System notification email	EU
Error monitoring provider	Application error reporting	EU
Customer support platform	Ticket handling	EU

Incident response

Aldermoor maintains a documented incident response plan, rehearsed twice a year. Where a personal data breach affecting a customer is confirmed, that customer is notified without undue delay and in any event within 72 hours of confirmation, with the facts known at the time and a named contact for follow-up.

Aldermoor Technologies — Work that finds its way. — www.aldermoor.example. This document describes a company that does not exist and is provided as sample data.
