

Support Handbook

How to reach us, what to expect, and how issues are escalated

Support tiers

Every Relay customer has access to support. The tier is determined by the plan, and sets the channels, the hours and the response commitments.

Tier	Available on	Channels	Hours	First response (P1)
Standard	Essentials	Email	09:00–17:00 GMT, Mon–Fri	1 business day
Priority	Professional	Email, live chat	07:00–19:00 local, Mon–Fri	4 business hours
Premier	Enterprise	Email, chat, phone	24 / 7 / 365	1 hour

How to raise a ticket

- Email support@aldermoor.example from the address registered on your account.
- Use the in-product help widget, available to any signed-in user.
- Live chat in the web application (Professional and Enterprise).
- Telephone +44 117 496 0184, option 2 (Enterprise only, 24/7).

A ticket should include the affected work order or technician identifier, the time the problem occurred, the expected and actual behaviour, and a screenshot or short screen recording where the issue is visual. Tickets that include a reproducible sequence of steps are typically resolved in less than half the time of those that do not.

Severity levels

Severity	Definition	Example
P1 — Critical	Relay is unavailable, or a defect stops all field work, with no workaround.	Technicians cannot receive jobs on any device.
P2 — High	A major function is degraded or unavailable; a workaround exists but is costly.	Scheduling optimiser is failing; jobs must be assigned by hand.
P3 — Medium	A function behaves incorrectly with a reasonable workaround.	A report exports the wrong date column.
P4 — Low	Cosmetic issue, documentation gap, or a question.	A label is mis-spelled on the settings page.

Response and resolution targets

Severity	First response (Premier)	First response (Priority)	Target resolution
P1 — Critical	1 hour	4 business hours	Continuous effort until resolved or worked around

Severity	First response (Premier)	First response (Priority)	Target resolution
P2 — High	4 hours	1 business day	3 business days
P3 — Medium	1 business day	2 business days	Next scheduled release
P4 — Low	2 business days	3 business days	Backlog, no committed date

Escalation

If a ticket is not progressing, any customer may escalate. Escalation does not require permission and does not affect the standing of the account.

- First — reply to the ticket asking for escalation. The support engineer will involve a senior engineer the same working day.
- Second — email escalations@aldermoor.example with the ticket reference. A support manager responds within one business day.
- Third — Enterprise customers may contact their Customer Success Manager directly, who can convene an incident review.

Service availability commitment

Aldermoor commits to a monthly uptime of 99.5% on the Professional plan and 99.9% on the Enterprise plan, measured across the production web application and API. Planned maintenance, announced at least five business days in advance and carried out within the published maintenance window, is excluded from the calculation.

The standard maintenance window is Sunday 02:00 to 06:00 in the region hosting the customer's data. Not every window is used.

Service credits

Where the monthly uptime commitment is missed, a service credit is available on request. A claim must be made within 30 days of the end of the affected month. Credits are applied against the next invoice and are the sole remedy for missed availability.

Monthly uptime achieved	Service credit
99.90% or above (Enterprise target met)	None
Below 99.90% but at or above 99.00%	10% of that month's fee
Below 99.00% but at or above 95.00%	25% of that month's fee
Below 95.00%	50% of that month's fee

Status and incident communication

- Live status is published at status.aldermoor.example and does not require a login.
- Subscribers receive email or webhook notification when an incident is opened, updated or resolved.
- A written post-incident review is published within five business days of any P1 incident.

What support does not cover

- Writing custom integrations on the customer's behalf — this is available as a professional services engagement.
- Fixing data quality problems that originate in a connected system.
- Training end users, beyond the onboarding sessions included with the plan.
- Supporting devices below the published minimum operating system versions.
